MAIL STOP 16

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

REQUEST FOR REFUND

Applicant hereby requests a refund in the amount of \$72.00 for the excess claims fee charged to Davis Munck Deposit Account No. 50-0208 on December 16, 2004. A copy of the Deposit Account Statement dated December 2004 is attached.

Applicant filed an Amendment Under 35 U.S.C. §1.111 on October 1, 2004 (copy enclosed). Since no new claims were added, no fee was due. Also enclosed is a copy of the return date-stamped acknowledging receipt of the Amendment Under 35 U.S.C. §1.111 and accompanying documents.

Please issue a credit in the amount of \$72.00 to Davis Munck Deposit Account No. 50-0208 for this overpayment.

Sir:

AMENDMENT UNDER 35 U.S.C. § 1.111

This Amendment is filed in response to the Office Action mailed June 1, 2004. Applicants respectfully request a one (1) month extension of time for filing a response to the Office Action. The response period is presently set to expire on September 1, 2004, and if this Request for Extension of Time is granted, the new response date will be October 1, 2004. Please amend the patent application as follows.

IN THE CLAIMS:

Please amend the claims as follows.

1. (Currently Amended) An assembly comprising:
a display device provided with a pattern of pixels associated with color filters, and
an illumination system for illuminating the display device,
said illumination system comprising a light-emitting panel and at least one light source,
said light source being associated with the light-emitting panel,
the light source comprising at least three light-emitting diodes having different light-emission wavelengths,
said light-emitting diodes being associated with the color filters,
said illumination system operable to drive the at least three light-emitting diodes to separately control the intensity of light emitted in at least one of said different light emission wavelengths and thereby change a color temperature and illumination level of a picture to be displayed by the display device.
2. (Previously Presented) An assembly as claimed in claim 1, wherein:
the light source comprises three light-emitting diodes having different light-emission wavelengths, and
the color filter comprises three color filters,
a spectral emission of each one of the three light-emitting diodes being substantially adapted to a spectrum of one of the color filters.

3. (Previously Presented) An assembly as claimed in claim 1 or 2, wherein:
 the light source comprises at least one blue light-emitting diode, at least one green light-emitting diode and at least one red light-emitting diode,
 the color filter comprises a blue, a green and a red color filter, and
 in operation, the blue color filter predominantly passes light originating from the blue light-emitting diode, the green color filter predominantly passes light originating from the green light-emitting diode and the red color filter predominantly passes light originating from the red light-emitting diode.

4. (Previously Presented) An assembly as claimed in claim 1 or 2, wherein at least one of the light-emitting diodes is chosen such that the wavelength associated with a spectral maximum of the light-emitting diodes corresponds to a wavelength associated with a spectral maximum of the corresponding color filter in the visible spectrum.

5. (Previously Presented) An assembly as claimed in claim 4, wherein the wavelength $\lambda_{\text{led}}^{\text{max}}$ associated with the spectral maximum of at least one of the light-emitting diodes and the wavelength $\lambda_{\text{cf}}^{\text{max}}$ associated with the spectral maximum of the corresponding color filter meet the relation: $|\lambda_{\text{led}}^{\text{max}} - \lambda_{\text{cf}}^{\text{max}}| \leq 5 \text{ nm}$.

6. (Previously Presented) An assembly as claimed in claim 1 or 2, wherein a spectral bandwidth (FWHM) of the light-emitting diodes lies in a range between $10 \leq \text{FWHM} \leq 50 \text{ nm}$.

7. (Previously Presented) An assembly as claimed in claim 6, wherein the spectral bandwidth lies in a range between $15 \leq \text{FWHM} \leq 30$ nm.
8. (Previously Presented) An assembly as claimed in claim 1 or 2, wherein an intensity of light emitted by the light-emitting diodes varies in response to an illumination level of the picture to be displayed by the display device.
9. (Previously Presented) An assembly as claimed in claim 8, wherein the intensity of the light emitted by the light-emitting diodes can be adjusted on a frame-to-frame basis.
10. (Previously Presented) An assembly as claimed in claim 8, wherein the intensity of the light emitted by the light-emitting diodes can be adjusted for each color on a frame-to-frame basis.
11. (Previously Presented) An assembly as claimed in claim 1 or 2, wherein each one of the light-emitting diodes has a luminous flux of at least five lumens.
12. (Previously Presented) An assembly as claimed in claim 11, wherein the light-emitting diodes are mounted on a printed circuit board.

13. (Currently Amended) A display device for use with an illumination system, comprising:

- a liquid crystal display panel comprising a plurality of liquid crystal elements operable to selectively allow passage of light from the illumination system; and
- at least one color filter operable to filter the light allowed to pass through one or more of the liquid crystal elements to produce one or more pictures;
- wherein the illumination system drives at least three light-emitting diodes to separately control the intensity of light emitted in at least one of said different light emission wavelengths and thereby change a color temperature and illumination level of the one or more pictures.

14. (Currently Amended) An illumination system for use with a display device, comprising:

- a light-emitting panel;
- at least one light source associated with the light-emitting panel, the at least one light source comprising at least three light-emitting diodes having different light-emission wavelengths, the light-emitting diodes associated with color filters in the display device; and
- a controller operable to drive the at least three light-emitting diodes to separately control the intensity of light emitted in at least one of said different light emission wavelengths and thereby change a color temperature and illumination level of a picture to be displayed by the display device.

15. (Previously presented) An assembly as claimed in claim 1, wherein:
the picture to be displayed by the display device is associated with one of a plurality of emission standards, each emission standard associated with a standardized color triangle; and
the illumination system is operable to tune the light-emitting diodes such that the display device displays the picture in accordance with the standardized color triangle of the emission standard associated with the picture.
16. (Previously presented) An assembly as claimed in claim 15, wherein:
the picture comprises one of a plurality of pictures, the plurality of pictures associated with different emission standards; and
the illumination system is operable to tune the light-emitting diodes such that the display device displays each of the pictures in accordance with the standardized color triangle of the emission standard associated with each of pictures.
17. (Previously presented) An assembly as claimed in claim 15, wherein the plurality of emission standards comprise National Television Standards Committee (NTSC), European Broadcasting Union (EBU), and High Definition Television (HDTV) emission standards.
18. (Previously presented) A display device as claimed in claim 13, wherein the at least one color filter comprises blue, green, and red color filters.

19. (Previously presented) An illumination system as claimed in claim 14, wherein:
the picture to be displayed by the display device is associated with one of a plurality of
emission standards, each emission standard associated with a standardized color triangle; and
the controller is operable to tune the light-emitting diodes such that the display device
displays the picture in accordance with the standardized color triangle of the emission standard
associated with the picture.

20. (Previously presented) An illumination system as claimed in claim 19, wherein:
the picture comprises one of a plurality of pictures, the plurality of pictures associated
with different emission standards; and
the controller is operable to tune the light-emitting diodes such that the display device
displays each of the pictures in accordance with the standardized color triangle of the emission
standard associated with each of pictures.

REMARKS

Claims 1-20 are pending in this application.

Claims 1-20 have been rejected.

Claims 1, 13 and 14 have been amended as shown above.

Reconsideration of Claims 1-20 is respectfully requested.

I. 35 U.S.C. § 103 – Obviousness

In the June 1, 2004 Office Action the Examiner rejected Claims 1-20 under 35 U.S.C. § 103(a) as being obvious over United States Patent No. 4,870,484 to Sonehara ("*Sonehara*") in view of United States Patent No. 6,213,615 to Siitari ("*Siitari*"). The Applicants respectfully traverse these rejections.

During *ex parte* examinations of patent applications, the Patent Office bears the burden of establishing a *prima facie* case of obviousness. MPEP § 2142; *In re Fritch*, 972 F.2d 1260, 1262, 23 USPQ2d 1780, 1783 (Fed. Cir. 1992). The initial burden of establishing a *prima facie* basis to deny patentability to a claimed invention is always upon the Patent Office. MPEP § 2142; *In re Oetiker*, 977 F.2d 1443, 1445, 24 USPQ2d 1443, 1444 (Fed. Cir. 1992); *In re Piasecki*, 745 F.2d 1468, 1472, 223 USPQ 785, 788 (Fed. Cir. 1984). Only when a *prima facie* case of obviousness is established does the burden shift to the applicant to produce evidence of non-obviousness. MPEP § 2142; *In re Oetiker*, 977 F.2d 1443, 1445, 24 USPQ2d 1443, 1444 (Fed. Cir. 1992); *In re Rijckaert*, 9 F.3d 1531, 1532, 28 USPQ2d 1955, 1956 (Fed. Cir. 1993). If the Patent Office does not produce a *prima facie* case of unpatentability, then without more the applicant is entitled to grant of a patent. *In re Oetiker*, 977 F.2d 1443, 1445, 24 USPQ2d 1443, 1444 (Fed. Cir. 1992); *In re Grabiak*, 769 F.2d 729, 733, 226 USPQ 870, 873 (Fed. Cir. 1985).

A *prima facie* case of obviousness is established when the teachings of the prior art itself suggest the claimed subject matter to a person of ordinary skill in the art. *In re Bell*, 991 F.2d 781, 783, 26 USPQ2d 1529, 1531 (Fed. Cir. 1993). To establish a *prima facie* case of obviousness, three basic criteria must be met. First, there must be some suggestion or motivation, either in the references themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine reference teachings. Second, there must be a reasonable expectation of success. Finally, the prior art reference (or references when combined) must teach or suggest all the claim limitations. The teaching or suggestion to make the claimed invention and the reasonable expectation of success must both be found in the prior art, and not be based on an applicant's disclosure. MPEP § 2142.

For the reasons set forth below the Applicants respectfully submit that the Patent Office has not established a *prima facie* case of obviousness with respect to Claims 1-20.

The Applicants respectfully direct the Examiner's attention to Claim 1. Claim 1 sets forth unique and novel claim elements.

1. (Currently Amended) An assembly comprising:
a display device provided with a pattern of pixels associated with color filters, and
an illumination system for illuminating the display device,
said illumination system comprising a light-emitting panel and at least one light source, said light source being associated with the light-emitting panel,
the light source comprising at least three light-emitting diodes having different light-emission wavelengths,
said light-emitting diodes being associated with the color filters,
said illumination system operable to drive the at least three light-emitting diodes to separately control the intensity of light emitted in at least one of said different light emission wavelengths and thereby change a color temperature and illumination level of a picture to be displayed by the display device. (*emphasis added*)

The *Sonehara* reference describes a color display device that associates a pixilated liquid crystal light shutter with color filters in order to modulate light from a light source. See *Sonehara*, Fig. 2A; col. 3, lines 11-27. As acknowledged in the June 1, 2004 Office Action, *Sonehara* does not teach controlling light-emitting diodes of a light source to change a color temperature of a picture to be displayed. The Applicants respectfully submit that neither does the *Sonehara* reference describe controlling light-emitting diodes of a light source to change an illumination level of a picture to be displayed, as recited in amended independent Claim 1. The only control of the illumination level of the color display in *Sonehara* is the liquid crystal light shutter. See *Sonehara*, Abstract, lines 3-5.

Similarly, the *Siitari* reference shows a back-lit liquid crystal display whose color temperature is set by balancing the relative brightness of two background light lamps having different color temperatures. See *Siitari*, col. 3, lines 8-10. However, *Siitari* teaches that the brightnesses of the two background light lamps are adjusted to keep the total brightness the same as either lamp's individual brightness. See *Siitari*, col. 3, lines 12-18. Thus, the *Siitari* reference actually teaches away from changing the illumination level of the display device by separately controlling the intensity of light emitted in different light emission wavelengths, as recited in amended independent Claim 1.

Independent Claims 1, 13, and 14 each recite an "illumination system" that is operable to drive at least three light-emitting diodes to change a "color temperature and illumination level" of one or more pictures to be displayed by a "display device." The Applicants respectfully submit that the *Sonehara* and *Siitari* references, either alone or in combination, do not disclose, suggest or hint at all the claim limitations of independent Claims 1, 13 and 14 as amended.

Accordingly, the Applicants respectfully request withdrawal of the § 103 rejections and full allowance of independent Claims 1, 13, and 14 (and their dependent claims).

II. CONCLUSION

The Applicants deny any statement, position or averment of the Examiner that is not specifically addressed by the foregoing argument and response. The Applicants reserve the right to submit further arguments in support of their above stated position, as well as the right to introduce relevant secondary considerations including long-felt but unresolved needs in the industry, failed attempts by others to invention the invention, and the like, should that become necessary.

SUMMARY

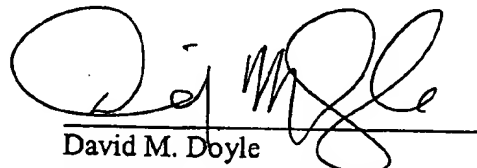

For the reasons given above, the Applicants respectfully request reconsideration and allowance of pending claims and that this application be passed to issue. If any outstanding issues remain, or if the Examiner has any further suggestions for expediting allowance of this application, the Applicants respectfully invite the Examiner to contact the undersigned at the telephone number indicated below or at ddoyle@davismunck.com.

The Commissioner is hereby authorized to charge any additional fees connected with this communication or credit any overpayment to Davis Munck Deposit Account No. 50-0208.

Respectfully submitted,

DAVIS MUNCK, P.C.

Sir:

CERTIFICATE OF MAILING BY FIRST CLASS MAIL

The undersigned hereby certifies that the following documents:

1. Request for Refund;
2. Copy of Amendment Under 35 U.S.C. §1.111 and accompanying documents as filed on October 1, 2004 and a copy of the return date-stamped postcard;
3. Copy of Deposit Account Statement dated December 2004; and
4. A return postcard

relating to the above application, were deposited as "First Class Mail" with the United States Postal Service, addressed to Mail Stop 16, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450, on March 7, 2005.
